

Appendix: errors and inconsistencies across the Resilient Schools proposal

Appendix: errors, inconsistencies and open definitions across the Resilient Schools proposal

*Prepared from the district's own documents: the Aug. 25, 2026 proposal deck; the February 2024, 2025 and 2026 Annual Enrollment Trend Reports; the Oct. 21, 2025 work session; the Resilient Schools FAQ and bvsd.org pages; the Sept. 9, 2025 boundary study; and BVSD's October pupil-count files. Every item cites the page. Items are graded: **E** = the documents contradict each other or themselves; **U** = a figure the documents use but never define or reconcile; **N** = a figure that cannot be reproduced from the documents' own inputs; **P** = a process fact. Nothing here asserts a motive. The purpose is to show that the figures on which every component rests have not been reconciled, so that the Board can ask staff to reconcile them before acting on any of them. Section 2 lists what does check out.*

1. Findings

A. Figures that disagree with each other

#	Item	What the documents say	Grade
A1	Resident students in the combined Bear Creek/Mesa area.	Deck p. 51: $275 + 228 = 503$ today; 473 projected for 2027-28; 522 for 2030-31. Deck p. 44 chart: 2030 projected-resident markers at about 268 (Bear Creek) and 177 (Mesa), about 445. The same year differs by about 77 students between two pages, and the p. 51 path falls 6% then rises 10%.	E
A2	Resident trend for Boulder vs for this area.	Deck p. 43: $2,113 + 1,757 = 3,870$ elementary residents in Boulder today, 3,522 projected for 2030: -9%. Deck p. 51: the Bear Creek/Mesa area's residents rise from 503 to 522: +4%. No document says why one South Boulder area grows while the region shrinks.	E
A3	The retention share behind each component's range is different, and unstated.	Each post-change range carries the same footnote: "dependent on number of resident students from the sending school attending the receiving school" (pp. 25, 37, 48, 51, 54). Decoding each range against the Feb 2026 standalone projections (p. 9): Birch → Kohl 82–100%; Flatirons → Foothill/Whittier 82–96%; Douglass → three schools 84–100%; Monarch K-5 → three schools 55–71%; Mesa → Bear Creek 41–71% (2030-31). The two components with the lowest implied shares are the two whose receiving buildings would otherwise be at or over capacity (Bear Creek 521 vs 492; Superior 96–98%). See Figure 13.	E / U
A4	Two descriptions of what the range is.	The deck footnote makes the range depend only on residents following. The FAQ (p. 3) says that where new enrollment "will push the school near capacity, enrollment projections take into account managing choice enrollment beginning in 2027-28." Which components' ranges include choice management, and at what level, is not stated.	U
A5	"Current" enrollments in the deck vs the October count.	Deck p. 25 gives Birch 259 and p. 37 Fireside 405; the official October 2025 funded head counts are 261 and 406 (pupil-count file, 2025-26 CDE Head Count Summary p. 1). The Feb 2026 table (p. 9, "updated 1/26/2026") carries the same 259 and 405 (and Aspen Creek 472 vs 473). Small, but the deck's "current" figures are not the published count for these schools, and the basis of the January update is not stated.	E (minor)
A6	The action date vs the district's own schedule.	Feb 2026 report p. 13: Phase 5 "Present final plan for study to the Board (September 2026)"; Phase 6 "Present final plan for action to the Board (October 2026)". Deck p. 3: action on September 22. No document in the set revises the schedule.	P
A7	Oct. 21, 2025 work session projections.	Slide 17 is number-for-number the Feb 2025 table (p. 9), i.e., the January 2025 run, presented in October without a vintage label; the January 2026 run then changed Bear Creek's 2029-30 figure by +14% and Mesa's by -10%. Slide 19 notes its chart "does not reflect new 2026-27 attendance area boundaries"; the Feb 2026 report does not say whether its run does.	U

B. Figures that are used but not defined or reconciled

#	Item	What the documents say	Grade
B1	Program capacity was restated for seven schools across the three tables, without explanation.	Feb 2024 → Feb 2025: Bear Creek 467 → 492 (+25); Coal Creek 516 → 492 (-24); Douglass 442 → 418 (-24). Feb 2025 → Feb 2026: Kohl 516 → 541 (+25); Aspen Creek 461 → 442 (-19); Community Montessori 392 → 369 (-23); Louisville 615 → 590 (-25). District total 14,608 → 14,585 → 14,543. The footnote in every table is "program capacity based on current use of the building"; no table says which rooms changed. Two of the schools whose capacity rose are the two receiving schools of the consolidations (Bear Creek +25, Kohl +25); one that fell is a school proposed for closure (Douglass -24). The utilization thresholds on which advisory status turns are computed on these denominators.	U
B2	Two definitions of a "round."	The tables convert enrollment to rounds at 150 students per round (Bear Creek 312 → 2.1; Mesa 224 → 1.5) but state capacity in rounds at a different divisor (492 = 3.5 rounds, i.e., 141 per round; 418 = 3.0, i.e., 139). At 150 per round the Bear Creek building is 3.3 rounds, not 3.5.	U
B3	Monarch 6-8 capacity is undetermined.	Deck p. 39: "Capacity: 890***"; "***Design will need to be completed to determine final capacity." The reconfiguration's utilization figures (63–67%, 55–58%) are computed on a capacity that does not yet exist.	U
B4	The open-enrollment priority every range depends on is still under study.	FAQ p. 2: "Staff presented a draft open enrollment priority to the Board for consideration ... The Board will study this item further on Sept. 8." Every post-change range assumes the flows this rule will govern.	P / U
B5	What 492 seats at Bear Creek contains.	Deck p. 49: Mesa's RISE program moves to Bear Creek; bvsd.org page p. 7: "all existing AIM and RISE programs would be housed at Bear Creek." No document gives the classroom footprint of these programs or says whether 492 nets them out.	U
B6	"10 schools needed" vs 13 remaining.	Deck p. 43: Boulder has 16 PK-5 schools and needs 10 "to sustain three classes/grade." The package closes three Boulder schools, leaving 13. Whether a further round is intended is not stated.	U
B7	Package headline "14 → 6 schools below two classes per grade" (p. 58).	The "14" reproduces exactly from the Feb 2026 table (14 non-exempt schools projected below 300 in 2030-31). The "6" cannot be reproduced from the deck's own ranges: after the package, the schools projected below 300 in 2030-31 are Heatherwood (260–268), Creekside (215), Community Montessori (167) and Sanchez (298), with Eisenhower below 300 at the low end of its range (297–302): four or five, plus the three exempt mountain schools. The definition behind "6" is not given.	N
B8	Post-change Boulder utilization "67.9%" (p. 55).	The current figure (63.1%, 2,585 open seats) reproduces exactly from the Feb 2026 table plus Horizons (capacity 7,005, enrollment 4,420). Removing the capacity the package closes in Boulder (Flatirons 320, Mesa 418, Montessori building 369; Douglass's building is re-used by High Peaks) and using the deck's own 2030 enrollment (4,241) gives 71.9%; using current enrollment gives 74.9%. 67.9% is reached only if post-change Boulder enrollment is about 4,005, roughly 240 below the deck's own 2030 projection. What the figure assumes is not stated.	N
B9	Cost figures.	Deck p. 60: recurring savings \$3.5–4.0M; facility modifications \$7.5–10.0M, "some offset by savings from Bond projects" (amount not given); transition support \$5.0M, "budgeted, FY27" (whether this is incremental to the plan is not stated). No per-school breakdown of either line for any component; no figure for maintaining or disposing of the four closed buildings ("Decisions about the future use of buildings are not part of the ... proposal", FAQ p. 3); no portable, program-relocation or transportation cost.	U
B10	Preschool locations after the vote.	Deck p. 64 and FAQ p. 4: locations for 2027-28 "will be shared by Oct. 1"; the vote is September 22. Five of the affected schools' preschool families cannot know where their program will be when the decision is taken.	P

#	Item	What the documents say	Grade
B11	Transportation exposure.	Deck p. 64 states the 1.5-mile eligibility rule but no count of addresses that cross it under any component. About 89% of the Mesa attendance area's land lies more than 1.5 miles from Bear Creek (BVSD ArcGIS polygons; area, not addresses).	U

C. Projection uncertainty that applies to every component

#	Item	What the documents say	Grade
C1	No range is stated for any school-level projection , and the ranges given for merged schools carry no probability. The district's own record shows one two-year-ahead school-level projection in ten missing by more than 13% (59 and 29 cases from the Feb 2024 and Feb 2025 tables against the October counts), and revisions to four- and five-year targets of about 12% at the 80th percentile, with a maximum of 46%.	U	
C2	Every projection is conditioned on the current portfolio. The package closes four buildings, moves two focus schools, redraws boundaries across the district (p. 59) and adds a one-year choice priority (p. 63). None of the post-change ranges says whether flows re-sorted by the other components are included; the FAQ's sentence on managing choice (p. 3) is the only text on the subject.	U	
C3	The district-level totals were revised too. Elementary total projected for 2028-29: 9,174 (Jan 2024 run), 9,444 (Jan 2025), 9,273 (Jan 2026); the Feb 2026 report itself records the 2025-26 count as "steeper than projected" (p. 5).	—	

2. What checks out (so the reader knows the audit was even-handed)

- Every post-change utilization percentage on pp. 25, 37, 39, 48, 51 and 54 reproduces from its own range and capacity to rounding.
- The Feb 2026 table's column totals (9,689; 9,408; 14,543) equal the sums of its rows; the advisory and engagement counts on p. 10 (7 + 2 for 2025-26; 6 + 5 for 2030-31) reproduce exactly from the table's rows at the stated thresholds; and the "14 schools at or below two classes per grade by 2030" on p. 11 reproduces.
- The deck's Boulder "current state" (63.1%, 2,585 open seats, p. 43) reproduces from the Feb 2026 table plus Horizons; its 2030 Boulder enrollment (4,241) is within 25 of the table's sum.
- The "capacity reduction 1,906" (p. 58) reproduces: Birch 418 + Flatirons 320 + Mesa 418 + Community Montessori building 369 + Monarch K-5 381.
- Mesa and Bear Creek's October counts, grade counts and prior-year figures reconcile exactly across all twelve years of pupil-count files, and CDE's membership agrees to within one or two students.

3. What the Board can ask staff to supply before acting on any component

1. One table, for every component: the share of the sending school's students assumed to follow, the resident capture rate assumed at each receiving school, the open-enrollment inflow assumed, and whether choice management is applied (A3, A4, B4).
2. The definition and reconciliation of the resident figures on p. 44 and p. 51, and of the Boulder resident trend on p. 43 against the area trends on pp. 25, 37, 48, 51 and 54 (A1, A2).
3. The room-by-room basis for each program-capacity change since January 2024, and the classroom footprint of AIM and RISE at each receiving school (B1, B5).

4. The inputs behind "67.9%" (p. 55) and "6" (p. 58) (B7, B8).
5. The kindergarten-intake assumption used in the January 2026 run for each school in the package, and the reason for the direction of Bear Creek's revision (A7).
6. By-school components of the \$3.5–4.0M recurring savings and the \$7.5–10.0M facility line; the bond offset; whether the \$5.0M is incremental; and the carrying cost of the closed buildings (B9).
7. The final capacity of Monarch 6-8 (B3) and the adopted open-enrollment priority (B4), both before any component that depends on them is approved.

Sources and reproducibility: every table above is computed in `analysis/08_district_claims.py`, `analysis/10_package_implied_shares.py` and `scripts/parse_ocr_capacity_tables.py` from the documents under `data/raw/`; the OCR'd capacity tables were checked row by row against the official October counts.
